**Notice of Proposed Remedial Action, for the
cleanup of groundwater contamination at the following site:**

Westport Community Store
37001 North Highway 1
Westport, CA
Case No. 1TMC404

Comment Period ends September 24, 2007

Problem Description

Gasoline impacted soil was found in 1998 when underground fuel storage tanks were removed from the south side of the Westport Community Store. The extent of gasoline contamination has been delineated through the installation of soil borings and groundwater monitoring wells. Currently, groundwater at the site is impacted with the gasoline additive MTBE and the related compound TBA. The impact is localized and is not found in the groundwater monitoring wells west of the site across Highway 1. Groundwater flow is generally westward in this area.

Proposed Corrective Action

The proposed corrective action is to add oxygen to the subsurface to enhance microbial degradation of the contaminants. Oxygen infusion wells will be installed in the area of contamination and will be connected to pressurized oxygen sources near the infusion wells.

North Coast Regional Water Quality Control Board staff intends to concur with the proposed action without further notice unless significant public comment is received by September 24, 2007. Please contact Craig Hunt at (707) 570-3767 or at CHunt@waterboards.ca.gov with any questions or comments regarding this project. You may also submit written comments to:
